

Sisyrinchium angustifolium

Blue-eyed Grass

Narrow light green leaves that form dense, tufted clumps. Small light blue, star-shaped flowers open in May. Thrives in open, sunny sites and ordinary garden soil that is kept moist. Benefits from periodic division. Lovely tucked in rock gardens, or in the front of a perennial border. Clumps can be an effective edging along a path or walk.

Suggested Companions: white oak (*Quercus alba*), hickories (*Carya* sp.), flowering dogwood (*Cornus florida*), lady fern (*Athyrium filix-femina*), early meadow rue (*Thalictrum dioicum*),
